

How the course operates

Due to the recent changes in the General Data Protection Regulation on the 25th May 2018, we want to explain how the MSc in Nuclear Science & Technology operates behind the scenes as this is not a standard Masters due to offering three Universities with whom you can register with.

- Your first decision will be where you want to register, you can apply to either The University of Liverpool, The University of Manchester or the University of Sheffield. Each university adheres to their Institutional degree regulations and terms & conditions.
- If you are successful in obtaining a place on the course, you will then register with your selected university in September.
- If you register at Liverpool or Sheffield University you will also need to apply to the University of Manchester as a short course attendee in order to obtain a Manchester ID number. All module information, lecture notes, distance learning material and assignment submission are offered via the University of Manchester's Blackboard system.
- Administrative support relating to module registration, examinations, assignments and results will come from the NTEC team here at University of Manchester.
- All marked exam papers and assignments will be kept here at the University of Manchester.
- For Liverpool & Sheffield University registered students the only difference to the University of Manchester students is where you register, your final dissertation and graduation as these are looked after by your registering university.
- **ALL** students will have a student file here at the University of Manchester.
- Mitigating Circumstances claims and disciplinary issues will be dealt with by your registering university.
